DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-34 are ejected under 35 U.S.C. 103(a) as being unpatentable over Lewis (US PAT # 6,285,748).

Regarding claim 1, Lewis teaches a method for managing telecommunication trunk groups (reads on the network traffic controller system, see abstract), the method comprising: receiving information regarding the configuration of telephony circuits

Art Unit: 2614

comprising each trunk group to be managed (see col. 1, lines 35-38); receiving traffic information regarding the historical volume of traffic (see col. 1, lines 39-52) using the hardware associated with trunk groups (see col. 3, lines 11-18).

Lewis teaches the terminals 102, 104 and 106, have a display unit as shown in Figs. 1 and 2.

However, Lewis does not specifically teach "displaying information regarding at least one trunk group...etc" as recited in claim 1.

Thus, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have these kind of information presented on display in order to make these information visible and easy to track. The use of display is old and well known in the art.

Claims 7, 13, 19, 29 and 34 are rejected for the same reasons as discussed above with respect to claim 1. The claimed feature of "determining the percentage utilization of each trunk group...etc" as recited in claims 13 and 29 may read on table 1 (see col. 4).

Claims 2-4, 14-15 20-23 and 30-31 are rejected for the same reasons as discussed above with respect to claims 1, 13, 19 and 29. Lewis teaches that the

Art Unit: 2614

monitoring and controlling the traffic is done automatically. Lewis does not teach that a user may select and control the displayed trunk group as recited in claims 12, 14, 20 and 30. However, it is obvious to one of ordinary skill in the art at the time the invention was made to controlling trunk group either manually or automatically. The feature of automatic verses manual is obvious and well known in the art and it does not raise to the level of patentability. *In re Venner*, 262 F. 2d 91, 95, 120 USPQ 193, 194 (CCPA 1958); the court held that broadly providing an automatic or mechanical means to replace a manual activity which accomplished the same result is not sufficient over prior art.

The limitations of claims 5-6, 16-18 and 32-33 of "removal" and "addition" of trunk are obvious and well known in the art because obviously an ordinary skill in the art may select and choose to add more trunks or remove trunks based on the need and desire.

Regarding claims 8-10 and 24-26, see col. 3, lines 56-67 and col. 4, lines 1-43.

Regarding claims 11 and 27 limitations, see col. 1, lines 8-22, col. 2, lines 1-14 and col. 4, lines 53-67.

For claims 12 and 28, see Fig. 3.
